Professional Summary

Computer Scientist and Application Developer with hands-on experience in building **scalable, high-performance web and mobile applications**. Proficient in **React Native** for cross-platform mobile development, with strong command over **Python, C, C++ and C#**. Experienced in designing clean, maintainable architectures, integrating APIs, and optimizing application performance. Recognized for strong problem-solving skills, solid understanding of **data structures, algorithms and software design principles** and delivering reliable, user-centric solutions tailored to real-world requirements.

Education

FAST National University of Computer & Emerging Science, B.S Computer Science Aug 2022 – Sep 2026

Relevant Courses: Data Structures and Algorithms, Generative AI, Claude Computing, Software Engineering

Skills

Languages: C++, Python, SQL, JavaScript, java

Framework/Technology: React Native, Nodejs, Nextjs, AWS, Git, GitHub, MySQL, Firebase, MongoDB, Bootstrap, Fine Tuning, Data Scraping, RAG, Clean Architecture, REST API,

Experience

Full Stack Developer (Intern) – Innovative Solutions

15/6/2025 – 20/8/2025

Eventra Application ([Live apk](#))

React native, Nextjs, MongoDB

Worked on **Eventra App**, an event management application that allows users to create, manage, and join events seamlessly. Contributed to designing smooth user flows for event creation, participation, and overall event lifecycle management.

Selected Projects (github.com/AsadAnalyst)

OutfitOrbit (Final Year Project) ([Blog Link](#))

React Native, Nextjs, Python, REST API, Firebase

Developed an AI-powered e-commerce platform with secure authentication and RBAC, featuring personalized outfit recommendations using machine learning and a personal wardrobe system. Integrated computer vision for image-based search and virtual try-on, along with RESTful APIs for seamless frontend and AI service integration.

WhatsApp Clone (Lead Developer) ([GitHub](#))

WebRTC, Node.js, HTML, CSS

Developed a Secure WhatsApp Clone using WebRTC, enabling direct communication without a centralized server. Implemented end-to-end encryption, text and Voice messaging, file sharing for enhanced privacy and real-time communication.

Flex management System (Lead Developer) ([GitHub](#))

OOP, C++, File Handling

The System operates all functionalities like FAST-NUCES Flex Academic Portal

VisionLoop CycleGAN (Built GAN) ([Live Huggingface](#))

Python, CycleGAN, ResNet, PatchGAN

Developed CycleGAN-based image translation system enabling sketch-to-photo and photo-to-sketch conversion without paired data, leveraging cycle consistency and adversarial training. Engineered a scalable deep learning pipeline using multi-source datasets, ResNet generators, and PatchGAN discriminators to produce high-quality, structurally consistent visual outputs.

Medical Q&A RAG System (Fine Tuning) ([Live Huggingface](#))

Python, MIMIC-IV Dataset, BioBERT, FLAN-T5

Built an AI-powered medical question-answering system using RAG with MIMIC-IV, leveraging BioBERT for clinical text understanding and FLAN-T5 for accurate answer generation (educational use only).

Task Manager App (Lead Developer) ([GitHub](#))

Java, SQLite, Volley API Quotes

A personal productivity Android app that allows users to manage daily tasks with ease. Features include task creation with title, description, due date, and priority, all stored in a local SQLite database. Users can update or delete tasks using a clean UI

Award & Honor

IBA University Silver Medal in Physics, Science Exhibition 2020

BISE -Nawabshah 2'nd Position in Nawabshah Division (Intermediate and Secondary) 2022
